Internship assignment: another retake!

The assignment

Our tool Scorion has a module where students can submit their forms. Everything is prepared centrally and sent automatically when the deadline has passed. As long as the students submit their forms, things go well, but as soon as the student misses a deadline, a logistical bottleneck arises.

If the deadline is missed, new forms must be inserted. Currently it is arranged so that this can only be done by the organization's central administrator. It would work easier if the instructor himself were given options to arrange this. It is up to you to build a feature where the instructor can initiate a retake. The idea is that the instructor can check a new task on his task list and prepare a new form for the student. This should also include the ability to set a new deadline and send a message to the student
