Scorion, accessible to all!

The assignment

At Scorion, one of the best questionnaire and survey tools available is being developed. Super easy and safe questionnaire creation. Creating a questionnaire is super easy and so is filling it in. Smartphone, ipad. Whatever you want. The questionnaire just scales with you. Except... For specific audiences. And that's the crux of this assignment. We think everyone should be able to fill out the questionnaire easily. Think of the possibility for a larger font for the visually impaired or a text that is read aloud for the hearing impaired. We want to do this using the WCAG(Web Content Accessibility Guidelines) standards.

The task is to modify our Scorion Survey formviewer to make the questionnaires accessible to all and to meet the Web Content Accessibility Guidelines.
